TRANSFORM THROUGH INSIGHT

Vendor Profile

Process Understanding

Apromore

Report Abstract

April 2023

By Mike Smart

NelsonHall

16 pages

Contents of Full Report

1. Introduction
2. Revenue Summary
3. Key Offerings
4. Delivery Capability and Partnerships
5. Target Markets
6. Strategy
7. Strengths & Challenges
 - 7.1. Strengths
 - 7.2. Challenges
8. Outlook

Who is this Vendor Assessment for?

NelsonHall's process understanding platform evaluation profile on Apromore is a comprehensive assessment of Apromore's process mining platform's capabilities, designed for:

- Sourcing managers monitoring the capabilities of existing suppliers of process discovery and mining platforms and identifying vendor suitability for process understanding RFPs
- Vendor marketing, sales, and business managers looking to benchmark themselves against their peers
- Financial analysts and investors specializing in the process understanding sector.

Key Findings & Highlights

Apromore is a process mining solution supporting the extraction and preparation of data from operational IT systems through its integration center, with pre-built connectors for common systems and RESTful API links.

Each process in Apromore is separated into a folder with a typical file structure detailing the logs and analyses within that process. Once process data has been loaded into the Apromore platform, users select the log file data within the process and can right-click the log, filter the data, and build dashboards or launch process analysis tools.

These process models, dashboards, and process analyses are displayed alongside the log data within a process, with iconography detailing whether the view into the process is a log or a process model.

Additionally, Process Discoverer offers a BPMN-centric approach to process flowcharts, with gateways between different flows being displayed with statistics for the gateways overlaid.

Apromore features a grid-based designer interface for building new analyses or customizing existing ones.

Apromore includes functionality for checking process conformance and training machine learning models to predict process characteristics of open cases from event logs through the UI, called Predictor.

Organizations which are looking to apply process mining across a number of different processes should consider Apromore and utilize the platform's non-consumption-based pricing model, which solely prices on the largest log file ingested into the platform.

Scope of the Report

The report provides a comprehensive and objective analysis of Apromore’s process mining capabilities and market and financial strengths, including:

- Identification of the company’s strategy, emphasis, and new developments
- Analysis of the company’s strengths, challenges, and outlook
- Revenue estimates
- Analysis of the profile of the company’s customer base, including the company’s targeting strategy and examples of current contracts
- Analysis of the company’s offerings and key service components
- Analysis of the company’s delivery organization, including the location of delivery centers.
